IDENTIFIERS	ACT Assessment; Scholastic Aptitude Test; *Texas

ABSTRACT

Since 1989 the Texas Education Agency has reported selected results from the Scholastic Aptitude Test (SAT) of the College Board and the American College Testing Program's original and Enhanced ACT Assessment for prior year graduating seniors. This fifth annual report presents these data for the 1991-92 graduating class. Texas statewide and district results are displayed along with aggregate results of the nation and other states. Also included are selected test score trends and scores among student subgroups and among selected groupings of Texas regular and special public school districts. The Texas mean SAT total fell to a maximum of 31 points below the national mean during the past 22 years, although means in 1991 (23 points below the national mean) and 1993 (17 points below the national mean) show some gain. The mean ACT composite score gap between Texas and the nation is the least in the past 22 years. The score gaps are often attributed to overall academic preparedness among groups. Four tables, supplemented by five tables in appendixes, present test results. (Contains 16 references.) (SLD)

PREFACE

Since 1989 the Texas Education Agency has reported selected results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's original and Enhanced ACT Assessment for prior year graduating seniors. This fifth annual report presents these data for the 1991/92 graduating class.

Since the fall of 1990, SAT and ACT score data have been included in Texas' Academic Excellence Indicator System (AEIS). The AEIS was mandated in summer 1990 Texas legislation (Senate Bill 1) to establish a system of school academic performance accountability to local communities and school boards and to state education and legislative officials. Additional legislation passed in the summer of 1991 (House Bill 2885) also mandated the use of SAT and ACT data along with other criteria in the determination of Texas Successful Schools Award System (TSSAS) awards and recognition in the 1991/92-1992/93 biennium. Use of SAT and ACT data for accountability purposes will continue in the 1993/94-1994/95 biennium. Note that neither TSSAS nor AEIS employs the rank ordering of campuses or districts based on SAT or ACT scores alone.

ACKNOWLEDGMENTS

This report was prepared by the Texas Education Agency's Office of Policy Planning and Evaluation in an effort to promote understanding of the college admissions test scores of graduating seniors and to suggest areas for school-level educational attention.

Appreciation is expressed for the capable work done by the American College Testing program staff (ACT assessment data) and Educational Testing Service staff (College Board's Scholastic Aptitude Test score data) in providing the necessary college admissions test score data for this report. In addition, staff in the Austin, Texas, regional offices of both ACT and the College Board have been extremely helpful over the years in facilitating TEA's access to these test score data.

This report was produced with assistance from Dr. Criss Cloudt, Associate Commissioner, Nancy Stevens, Dr. Cherry Kugle, and Cathy Long of the Office of Policy Planning and Evaluation.

OVERVIEW AND INTERPRETATIVE ISSUES

Results from the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program and the American College Testing Program's Enhanced ACT Assessment, a revised ACT that replaced the original ACT effective October 1989, are reported for 1991/92 graduating seniors. Texas statewide and district results are displayed along with aggregate results of the nation and other states. Included also are selected test score trends and scores among student subgroups and among selected groupings of Texas regular and special public school districts as defined by the Texas Education Agency (TEA). Plus, the report contains state, district, and various district grouping summaries of the combined SAT and ACT results, as defined within Texas' Academic Excellence Indicators System (AEIS) (TEA, 1993b). Report purposes are to promote understanding of the diversity existing among graduates tested and to suggest areas for educational action in the schools.

For individual students, college admissions tests are measures of developed academic abilities that are best used in conjunction with other measures such as high school grade point average and courses taken to predict academic performance in college. When examined over time, aggregate changes in these test scores may indicate how well educational institutions are preparing students for college. However, it is always inappropriate to make decisions about individuals, groups of individuals, or educational institutions based on SAT or ACT test scores ***alone***. Because not all graduating seniors take the SAT or ACT, comparisons among educational entities are best made when the percentage of students tested, student characteristics, and education and policy context are similar (also see College Entrance Examination Board, 1988, and the ACT Program, 1991c). Ultimately, the critical outcome is increased student academic preparedness as reflected by increased scores without reducing students' participation in (percentages tested) or access to the testing.

Some data in this report originate from summary reports of state and national test score profiles of public and non-public high school graduates released annually by the College Board (The College Entrance Examination Board, 1993a, 1993b, 1992a, 1992b) in August and by ACT (The American College Testing Program, 1993a, 1993b, 1992a, 1992b) in September. Texas' public school student test score data were provided directly to TEA by the two testing programs. Additional TEA district characteristics data were examined in conjunction with the most recent scores from 1991/92 seniors (through March 1992 for the SAT).

Verbal and Math scores from the SAT range from 200 to 800 and sum to the SAT Total score ranging from 400 to 1600. Since October 1989, the (Enhanced) ACT Assessment consists of English, Math, Reading, and Science Reasoning test scores with a standard score range of 1 to 36; the Composite is the average of these four scores. ***Note that Enhanced ACT scores beginning in 1989/1990 and original ACT scores reported on a different scale beforehand are noncomparable.***

TEXAS VERSUS NATIONAL TRENDS

The Texas mean SAT Total (sum of Math and Verbal scores) fell to a maximum of 31 points below the national mean during the past 22 years, although the Texas mean of 876 in 1992 and 885 in 1993 was increasingly higher at 23 points below the 1991 national mean of 899 and 17 points below the 1993 national mean of 902. The mean ACT Composite score gap between Texas (19.9 in 1992 and 20.1 in 1993) and the nation (20.6 in 1992 and 20.7 in 1993) is the least ever in the past 22 years. Reasons often given for score gaps include the overall academic preparedness among groups, which sometimes relates to differences in the proportions of traditionally low-scoring, under-prepared examinees. Repeatedly, findings reported by the two testing programs and researchers have shown the tendency for test scores to increase as the amount of academic coursework goes up.

*Criterion score percentages were based on all graduating seniors (1992 **and** 1991 classes each appear above); previous TEA reports (e.g., TEA, 1991) based these percentages on just ACT-tested graduating seniors and a criterion score of 24.

BEST COPY AVAILABLE

In general, Texas SAT-tested students have completed fewer academic courses than students nationally (25 versus 41 percent, respectively, at the 20+ courses level in 1992), supporting the notion of differential academic preparedness, but the better prepared Texas students have tended to score just as well or higher than students nationally. Despite the fact that the number of ethnic minority students tested has grown, Texas minority student mean scores have improved somewhat compared to majority student scores over the past few years. Typically, Texas SAT and ACT score results have shown minority students completing relatively fewer academic courses when compared to majority students—one possible reason for mean score discrepancies among ethnic groups.

College Board reports also indicate that the generally higher scores achieved by men relative to women on the SAT may relate to the rigor of academic courses they take. For instance, disproportionately fewer women have tended to enroll in mathematics courses such as geometry, trigonometry, and calculus and in natural sciences courses such as chemistry and physics. In terms of ACT Composite scores, the higher scores achieved by women on the ACT English test largely offset the higher scores obtained by men on the ACT Math test. Although 1991, 1992, and 1993 Texas ACT Composite scores were virtually the same for males and females, the Math, English, and Science Reasoning score differences deserve continued scrutiny. For further detail regarding some of the 1991 92 Texas versus national SAT results discussed above, see Table 1; for similar 1991 92 ACT results, see Table 2.

AEIS Indicators of Texas College Admissions Test Results

As mentioned previously, Texas' Academic Excellence Indicators System (AEIS) includes measures of combined but unduplicated percentages of graduating seniors tested and percentages meeting a specific score criterion on either the SAT (SAT Total: at or above 1000) or the ACT (ACT Composite: at or above 24). In other words, even if a student took both tests, each individual's participation or criterion score achievement is counted only once in calculating these percentages. Before 1990 91, TEA did not receive the type of data from the two testing programs that allowed calculation of these values.

Table 3 displays the statewide averages for percentages of SAT- and or ACT-tested 1991 92 public school seniors and the percentages meeting the criterion score on either test. (Note that Table 1 contained these percentages for the SAT; Table 2, for the ACT.) Although females participated more often in SAT and or ACT testing than males, males met the criterion for either test more often than females. This was consistent with state and national results for both the SAT and ACT separately. Score gaps among ethnic groups were apparent from inspection of the differences in percentages meeting or exceeding criterion scores and also were consistent with separate SAT and ACT results.

TABLE 3

Number* and Percentage* of SAT- and/or ACT-Tested Graduates and of Graduates At or Above Criterion Score on Either Test (1991/92 Texas Public School Graduates)**

Group	Number* Tested	Number* of Graduates	Percent* Tested	Number* At or Above Criterion**	Percent* At or Above Criterion**

White	58,939	85,082	69.3	19,231	22.6

Source: TEA, PEIMS, actual public school graduate numbers; TEA, Office of Policy Planning and Evaluation, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in AEIS (TEA, 1993a).

*Group numbers may not add to total for all groups because gender and ethnic group for some students was not included or was not known.

**The 1993 Academic Excellence Indicator System college admissions test criterion scores are an SAT Total = 1000 and or an ACT Composite = 24.

TEXAS AND THE OTHER STATES

Table 4 presents results of the SAT testing program for the 50 states for 1991/92 (College Entrance Examination Board, 1992c). Average scores on the verbal portion of the test ranged from 394 to 512, and on the mathematics portion from 437 to 584. The percentages of students taking the test ranged from 4 percent in Mississippi to 79 percent in Connecticut. These figures were calculated by the College Board based on estimates of the total number of public **and** nonpublic school graduates in each state and in the nation. The Texas graduates tested total was 80,174; Texas public school graduates, 72,104 (see Table 1).

STATE AND DISTRICT PERCENTAGES OF SAT-TESTED STUDENTS

As presented in previous years of this report, results indicated that higher 1992 mean SAT scores by state were associated with lower percentages of seniors taking the test. Reasons often given for this relationship are that primarily only the most academically able in the state take the test and/or that the majority of the state's colleges and universities historically prefer or require another admissions exam such as the ACT. In contrast, relatively low mean SAT scores and high percentages tested in states such as Texas appear to occur because more students of varying academic backgrounds are tested, which lowers averages overall.

TABLE 4

Source: College Entrance Examination Board (1992c).

However, this relationship did ***not*** persist for school districts in Texas and for states when other factors were considered. For instance, when Texas was grouped with 23 other states with over 35 percent of seniors tested, the relationship was much lower or barely in evidence. These correlational fluctuations underscore the inaccuracies inherent in making state or other types of simple group comparisons based on test scores alone, especially when the percentages tested, along with other educational and demographic factors of the state or group, are markedly dissimilar. For district mean data within Texas, negligible correlation existed between test scores and percentages tested. Statewide, districts also varied greatly in patterns of SAT versus ACT testing participation, as well as in percentages tested.

DISTRICTS WITHIN TEXAS

The SAT results listed for each district in Table 1-A in the Appendix include average SAT Math, Verbal and Total scores of 1992 graduating seniors, number of graduating seniors with SAT scores, total number of graduates, percent of graduates with scores, number and percent of SAT-tested graduates with SAT Total scores of 1000 or higher, and a "note" column for district-specific comments. Similarly, ACT results are listed by district in Table 2-A of the Appendix, except that average ACT English, Math, Reading, Science Reasoning, and Composite scores are reported rather than SAT scores. Finally, Table 3-A in the Appendix shows by district the number and percentage of SAT- and or ACT-tested graduates and of graduates scoring at or above the criterion on either test, a "test note" column about limitations to a specific test or lack thereof, and "note" column in correspondence with Tables 1-A and 2-A.

More specifically, average SAT and ACT scores for districts are not listed when the number of graduates with scores is less than five because of the instability of statistics based on such low numbers of scores. A "< 5 tested" note is printed for these districts. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts with fewer than five students scoring at least 1000 or above for the SAT Total or having an ACT Composite score at 24 or higher were given a "< 5 high" comment. Districts with no graduates tested received a "none tested" note, and districts with no TEA-recorded graduates reflect "no grads/TEA." The test note column in Table 3-A displays "SAT only" or "ACT only" when statistics were based on just one of the two tests and lists "neither" when neither test was given to students in a district.

Overall, data on 76,987 public school graduates in 1992 who participated in the Admission Testing Program's SAT and/or Achievement Tests and data on 49,677 students taking the ACT were obtained directly from the testing sponsors for this report. District results showed a complete set of SAT scores for 72,104 graduates and ACT scores for 49,657 graduates. Although the believed effect is small, some amount of inaccuracy may have resulted in using high school codes supplied by the testing programs to link students' scores to schools and districts (personal communication, 1989). In another small set of cases, student miscodings of one of the fields used for student matching may have resulted in more than one set of scores per student (personal communication, 1990). Such discrepancies may have caused some imprecision in estimating percentages of graduates tested. When graduate tested percentages above 100 resulted in Tables 1-A, 2-A, and 3-A, they were reset to 100.

Combined results for the 972 public school districts with graduating seniors or test score data indicated: both SAT- and ACT-tested graduates for 843 districts, an additional 95 districts with ACT-tested students only and 32 with SAT-tested students only, and 2 districts showing neither SAT nor ACT participation. Of the 970 districts with SAT and/or ACT participation, 430 showed fewer than five graduates meeting the SAT and/or ACT criterion score, 64 had fewer than five graduates taking either test, and 8 districts had no graduates according to TEA records.

DISTRICT AND STUDENT CHARACTERISTICS DATA

Tables 4-A and 5-A in the Appendix present results of the two testing programs when the district data are aggregated into 26 types of groupings of districts with similar characteristics as defined in the Glossary and by TEA's ANALYZE program. From these, results in both tables start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. These groupings allow examination, by the various district characteristics, of the pattern of: district average scores and percentages of students tested for each test separately in Table 4-A; in Table 5-A, percentages of SAT- and/or ACT-tested graduates and percentages meeting the score criterion on either test, as defined within AEIS (TEA, 1993b). Other results described below but not shown in these tables concern summaries of scores grouped by student-level characteristics, which were obtained for the SAT from the Student Descriptive Questionnaire and for the ACT from the Student Profile Section and High School Course Grade Information portions of the Student Information booklet.

Many of the separate mean SAT Total and ACT Composite score results and the 1992 combined SAT and/or ACT graduate percentages meeting the score criterion (per AEIS) were consistent with most published findings. For instance, increasing district wealth, increasing student family income, or decreasing percentages of low-income students within districts, corresponded with rising mean scores for data from the 1988 through 1992 school years. Other relationships and similarities existed between the college admissions testing data and the: (a) district average percentage of students passing all sections of the 1991-92 Texas Assessment of Academic Skills (TAAS) test, (b) district average on the prior year SAT and ACT scores, (c) district average teacher salaries, (d) district average percentage of teachers with advanced degrees, (e) student letter grade average, and (f) student number of academic courses completed. That is, mean scores went up as the values of each of these variables rose.

Considerations for Educational Action in the Schools

A distinction should be made between demographic and educational variables related to test scores. This distinction is important because the education community should focus on the attributes that it can most directly influence. In other words, variables such as family income or parent level of education are not under the school's practical domain of control.

In adhering to the distinction above, a number of approaches are suggested for educational action in the schools to improve students' academic preparation for college. These center on encouraging students to take a greater number of academically challenging courses, increasing the array of rigorous, challenging courses offered, and encouraging more participation in college admissions testing programs. Schools must ensure that the courses offered cover genuinely advanced material and are not simply labeled as advanced courses. For some districts, the most practical option for expanding the array of rigorous course offerings may depend on technology such as distance learning.

In addition, schools are advised to: (a) guard against low expectations for female, minority, and other student groups; (b) avoid "steering" these student groups into types of courses that are less rigorous academically; and (c) monitor tendencies for students to take easier courses to maintain high or acceptable grade point averages. Encouraging students to take courses that focus primarily on preparation for taking college admissions tests should be carefully considered. Only well-designed and well-executed supplemental courses focused on improving test-taking strategies, coupled with instruction that broadly addresses verbal or quantitative skills, are recommended for consideration, especially for students from traditionally low-scoring groups. In summary, the educational goal in this context is to better prepare students for college, not simply to raise college admission test scores.

1992 SAT and ACT Results in Review

A brief review of the 1992 SAT and ACT results is provided to help reinforce the targeting of improvement efforts in areas under the most direct control of the schools—that is, student access to educational opportunities and testing participation. For interpretation purposes, note that comparisons among aggregate scores from any educational entity, state, or group are best made when testing participation rates, student characteristics, and education and policy contexts are similar. Highlights below focus on differences between/among Texas and the nation and other states, various types of students, and Texas school districts.

- The last decade showed some recovery over the previous decade's decline in both Texas and national SAT averages, with relatively more improvement in Texas within the last six years. The average 1992 Texas SAT Total of **876** was 23 points below the national average of **899**; in 1993, Texas at **885** was 17 points below the nation at **902**.

- ACT Texas versus national score trends mirrored SAT score trends over the same period. The 1992 Texas average ACT Composite score of **19.9** compared to a 1992 national average of **20.6**; in 1993, Texas reached **20.1** compared to the nation at **20.7**.

- Although Texas SAT-tested students had less academic preparation than students nationally, percentages completing the 20+ courses level improved from 23 percent in 1991 to 25 percent in 1992 and to 27 percent in 1993; SAT- and ACT-tested ethnic minority students had fewer academic credits than majority students, and females completed fewer of the rigorous math and natural sciences courses than males.

- Despite the growth in numbers of ethnic minority students tested in recent years, Texas minority ACT and SAT scores have shown some improvement relative to the majority, although scores of the majority still tend to be higher.

- A relatively higher percentage of 1992 Texas public school graduates took the SAT (49%) compared to the ACT (34%); altogether, slightly over 63 percent took the SAT and or the ACT, based on unduplicated student counts. These percentages were still below the highest 1992 state percentage (79%) reported for just SAT-tested graduates in Connecticut.

- Differences between males and females and among ethnic groups in the percentages of public school graduates scoring at or above the SAT and or ACT criterion scores were consistent with separate SAT and ACT mean score results covered in this and other published reports.

- In general, states with the lower percentages of SAT-tested seniors tended to show higher state mean SAT scores, and vice versa. In Texas, the simple relationship between district average SAT or ACT scores and district percentage of seniors tested was negligible.

- Considering both 1992 SAT and ACT results together for 972 public school districts indicated that the vast majority (843) of districts participated in both SAT and ACT testing; only two districts showed no testing participation. A total of 906 districts reflected five or more graduates taking the SAT and or ACT.

- Consistent with previous findings, SAT Total and ACT Composite scores tended to go up as the values of certain demographic variables rose including: district wealth, student family income, district percentage of non-low-income students, district average teacher salary, and district percentage of teachers with advanced degrees.

- In general, SAT and ACT average scores also increased as the values of selected educational variables went up including: district average percentage of students passing all sections of the 1991-92 TAAS test, prior year district average SAT and ACT, student letter grade average, and student number of academic courses completed.

In conclusion, the most general suggestion to the educational community for improving students' SAT and ACT scores, or academic preparation for college, is to focus on improving the academic preparation of all students, while also encouraging testing participation. That is, schools and communities should work on increasing educational inputs rather than faulting school or student demographics, which are less subject to the direct influence of schools.

GLOSSARY OF 1991-92 ANALYZE CATEGORY DESCRIPTIONS

Enrollment Groupings

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

District Type

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas as follows:

Major Urban. The state's eight largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, Corpus Christi, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000.

Non-Metro: Fast Growing. Districts not fitting in any of above categories but exhibiting a five year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting any of above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting any of above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

Property Wealth

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year—i.e., 1991, as determined by the Comptroller's Property Tax Division (CPTD), whereas enrollment is for the 1991-92 school year. The first wealth grouping shows ten categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping. The six special statutory districts without taxable property wealth form a separate group in all three wealth groupings.

Total Tax Effort

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. The total effective rate is the sum of the school district Maintenance and Operations (M&O) rate, including the County Education District (CED) rate, and the Interest and Sinking Fund standardized rate. Rates are expressed per $100 of taxable value. The six special statutory districts without property tax levies appear separately.

Maintenance and Operations Effective Tax Rates

A four-category tax effort grouping of districts showing the maintenance and operation (M&O) effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rate shown includes both the local standardized rate and the CED standardized rate. The six special statutory districts without property tax levies appear separately.

Highest Property Value Category

A 13-category CPTD classification based on property use. These 13 are aggregated into four categories as follows:

Residential. Single-family, multi-family, and residential inventory;

Land. Vacant lots and rural real (taxable);

Oil and Gas. Oil, gas, and minerals; or

Business. Commercial and industrial real, commercial and industrial personal, and utilities.

A district is placed into one of the four categories above that represents its greatest total property value. The six special statutory districts without taxable property wealth form a separate group.

Academic Excellence Indicator (AEI) Groups

A 16-category grouping of districts by enrollment size, district wealth above or below the state average, and low income students above or below a level of 40 percent. The six special districts without taxable property wealth form a 17th category. The 16 categories allow districts with similar characteristics to be compared under the Academic Excellence Indicators System (AEIS).

Small/Sparse Adjustment

A four-category grouping of districts based on the small/sparse adjustment amount as a percent of the total adjusted basic allotment amount. A fifth category contains all districts receiving no small/sparse adjustment. This percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

Cost of Education Index Level

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control.

Operating Cost Per Student

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall submission of PEIMS.

Education Service Center Region

The state is divided into 20 geographic regions; districts within each region are served by an Education Service Center.

TAAS: Percent Passing All Tests Taken

A five-category grouping of districts based on the percent passing the Fall 1991 Texas Assessment of Academic Skills (TAAS). For grades 3, 5, 7, 9, and 11, the total number of students passing all sections taken of the TAAS is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes special education students and 3rd graders taking the test in Spanish.

Average SAT Score

A four-category grouping based on district average scores on the 1990-91 Scholastic Aptitude Test (SAT). A fifth category is reserved for districts in which no 1990-91 SAT was administered.

Average ACT Score

A four-category grouping based on district average score on the 1990-91 American College Testing Program's ACT Assessment. A fifth category is reserved for districts in which no 1990-91 ACT was administered.

Student Density

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB), the Texas Education Agency, and the Texas Water Commission. Maps provided by districts to the SPTB were digitized by the Water Commission to determine acreage. The six special statutory districts without available mileage information form a separate group.

Enrollment Change From Prior Year

A five-category grouping based on the growth or decline in district student population over a one year period. Districts with declining enrollment represent one category, while remaining categories show one-year growth rates ranging from "0%-3%" to "10% and over."

Percent African American, Hispanic, and Minority Students

Three six-category sets of groupings according to the ethnic composition of district student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-white populations expressed as a percentage of the total. Non-white populations include: Native American or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

Percent Low Income Students

A six-category grouping according to the district percentage of enrolled students classified as economically disadvantaged on PEIMS as follows:

(a) Eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;

(b) From a family with annual income at below the federal poverty line;

(c) Eligible for AFDC or other public assistance;

(d) Recipient of Pell Grant or comparable state need-based financial assistance program; or

(e) Eligible for programs assisted under Title II of the Job Training Partnership Act.

Average Teacher Experience

A four-category grouping of average teacher experience years—i.e., total professional experience years for all district teachers divided by total teacher full-time-equivalent (FTE) count.

Average Teacher Salary

A four-category grouping by average district teacher salary—i.e., the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include career ladder or any other supplement.

Percent of Teachers With Advanced Degrees

A four-category grouping by district percentage of teachers with advanced degrees—i.e., the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

Percent Minority Teachers

A six-category grouping according to the minority composition of district teaching populations. Minority percent is calculated by summing all non-white teacher FTEs and dividing by the total teacher FTEs (PEIMS roles 025 or 029).

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

(1) acceptance policies on student transfers from other school districts;

(2) operation of school bus routes or runs on a nonsegregated basis;

(3) nondiscrimination in extracurricular activities and the use of school facilities;

(4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;

(5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;

(6) nondiscriminatory practices relating to the use of a student's first language; and

(7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Employment Opportunity/Affirmative Action employer.
